Summary

Full Stack Developer and Active Open Source Contributor with hands-on experience building production-ready web applications. Currently maintaining Exmanga browser extension serving 5,000+ monthly users while developing ToolBox-Activator (135+ GitHub stars), an automation tool for JetBrains IDEs used globally. Skilled in Java Spring Boot, React.js, and cross-browser development with proven ability to independently deliver complete solutions across healthcare, marketing, and gaming domains. Successfully developed healthcare monitoring platform serving medical professionals, promotional website with AI-powered translation, and viral Telegram bot attracting 200+ concurrent users. Pursuing BSc Computer Science at University of Birmingham while actively contributing to real-world software projects and growing open-source community presence.

Experience

Frontend Developer

International Allergic Department of Uzbekistan, Tashkent

May 2024 — Jul 2024

- **Lead Frontend Development** for the `icma.uz` monitoring platform, serving medical professionals in a two-person team
- **Designed and implemented** a responsive UI and client-side data processing logic, ensuring a seamless user experience
- **Integrated RESTful endpoints** in close collaboration with the backend developer, optimizing data flow architecture for the healthcare management system

Fullstack Developer

Unigo, Tashkent

Apr 2025 — Jun 2025

- **Engineered** `ilmpay.com` **from scratch**, delivering a full-stack promotional platform with a custom administrative dashboard using Java Spring Boot and React.js
- **Implemented an AI-powered localization system** for the admin panel, enabling automatic content translation across Uzbek, Russian, and English
- **Architected the complete backend infrastructure**, including database management and secure RESTful APIs for content control

Full Stack Developer

Redstone Group, Tashkent

Dec 2024 — Mar 2025

- **Developed and launched "CATCH RSG"**, a viral Telegram game bot that successfully handled **200+ concurrent active users** during a cryptocurrency campaign
- **Built the full solution** using Python Django for the backend admin panel and HTML5/CSS3/JavaScript for the frontend game interface
- **Managed the entire deployment cycle**, including server configuration and performance optimization to ensure stability under high traffic loads

Browser Extension Maintainer

Exmanga

Dec 2025 — Current

- **Independently ported** the original Chrome extension to the Firefox ecosystem, ensuring full cross-browser compatibility.

- **Invited to join the core development team** by the project creators after successfully delivering the Firefox adaptation.
- Currently **maintain and update** the Firefox version for **5,000+ monthly active users**, implementing new features and resolving browser-specific issues.

Education

Foundation Year leading to BSc Computer Science, United Kingdom, Birmingham, 2025 — 2029

University of Birmingham

Currently completing Foundation Year program with plans to progress to Computer Science degree. Actively building technical expertise through professional development experience in full-stack web development alongside academic studies.
